

OVERALL STRUCTURE - JINGZHANG RETURN LINE CONCEPT

Building a resilient urban innovation district through four major loops

FOUR MAJOR LOOPS • INTERCONNECTED FUTURE

TIME-SPACE LOOP

Preserving industrial memory and cultural heritage, linking the past and future to create a time-travel experience along the line.

Railway Heritage

Industrial Memory

Machine Aesthetics

LIFE LOOP

Building lively neighborhoods, diverse living scenes, and connected public spaces to create walkable, 15-minute community life with strong civic identity.

Greenway

Community Plaza

Public Facilities

ECOLOGICAL LOOP

Restoring ecosystems along the corridor, connecting mountains, waterways and urban life to build a resilient ecological network.

Rainwater Park

Eco-lake

Wetland Restoration

INNOVATION LOOP

Empowering innovation through industry-academia-research collaboration and digital technology to build a dynamic innovation ecosystem.

Smart Mobility

Digital Industry

Sci-Tech Innovation

JINGZHANG RETURN LINE FOUR LOOPS INTEGRATED

THREE MAJOR LOOPS • FIVE MAJOR FUNCTIONS

THREE MAJOR LOOPS

CULTURAL LOOP

Mobility & Connectivity

THREE TYPES OF INCREMENTAL AND STOCK RENEWAL

Underground-ground integrated development, coordinated renewal of three-dimensional space

VERTICAL DEVELOPMENT
Maximize vertical space utilization

FUNCTION UPGRADE
Transform & revitalize functions

CONNECTION INTEGRATION
Build seamless vertical links

SMART MANAGEMENT
3D integrated operations

EIGHT MAJOR INFRASTRUCTURE SYSTEMS

JINGZHANG RETURN LINE SPATIAL STRUCTURE OVERVIEW

One urban spine with multiple nodes, building a dynamic innovation corridor

PLANNING AREA

≈42 km²

TOTAL LENGTH

≈24.3 km

SERVICE POPULATION

≈850,000

GREEN RATE

32.5%

INVESTMENT SCALE

≈42.8 Billion CNY

PLANNING PERIOD

2024-2035

01-04 FOUR STAGES OF DEVELOPMENT

01

CULTURAL AWAKENING

Protect & Reveal Heritage

- Heritage Protection
- Site Remediation
- Pilot Projects

02

ECOLOGICAL RESTORATION

Repair & Connect Ecology

- Habitat Restoration
- Water System
- Green Network

03

FUNCTIONAL INTEGRATION

Integrate & Activate Functions

- Mixed-Use Program
- Public Space Network
- Activation of Nodes

04

FUTURE LEADERSHIP

Innovate & Lead the Future

- Intelligent Operation
- Innovation District
- Sustainable Growth

RAIL TRANSIT NETWORK PLAN

Multi-modal connection, activating the corridor

01 Seamless North-South Transit Spine

02 Multiple Modal Integration Network

03 Efficient Connections to Regional Systems

04 Fine-grained Station Accessibility

05 Walkable & Bikeable Last-Mile Network

BLUE-GREEN PUBLIC SPACE CORRIDOR

Linking the city with ecology to create a vibrant corridor

NEW GREEN SPACE

≈168 ha

Increase of 32.5%

WATER AREA

≈42 km²

A01 OVERALL STRUCTURE

Building a resilient urban innovation district through four major loops

Building open connectivity, functional integration, and ecosystem co-creation to achieve a resilient and integrated urban spatial structure.

01 FOUR DEVELOPMENT STAGES

Tracing the evolution of the spatial development backbone, empowering future innovation.

01 ORIGINS

Historical roots /
Cultural inheritance

Cultural roots,
historical continuity

02 GROWTH

Industrial development /
Functional activation

Industrial foundation,
functional activation

03 ACCELERATION

Innovation-driven /
Technical empowerment

Innovation clusters,
engine-driven growth

04 FUTURE

Future-oriented /
Ecosystem integration

Ecosystem integration,
future resilience

02 OPEN CONNECTIVITY

Multi-layer connectivity builds an open network linking the city and the region.

03 THREE MAJOR LOOPS, FIVE FUNCTIONS, THREE TYPES OF RENEWAL

Building a spatial organization that integrates loops, functions, and renewal.

THREE MAJOR LOOPS

- Comprehensive Mobility Loop
Integrated multi-modal circulation
- Innovation & Service Loop
Integrated innovation and services
- Ecological & Livable Loop
Green ecology and livable spaces

FIVE FUNCTIONS

THREE TYPES OF RENEWAL

- Spatial Renewal
Land use optimization
 - Capacity Enhancement
Intensity improvement
 - Quality Improvement
Public realm upgrade
- Loop-driven renewal and spatial resilience

04 EIGHT MAJOR INFRASTRUCTURE SYSTEMS

Building a closed-loop system from R&D to urban heat island mitigation.

05 BLUE-GREEN PUBLIC SPACE CORRIDOR

Building a continuous blue-green network for ecology and vitality.

GREEN SPACE

168 km²

WATER AREA

42 km²

GREEN COVER

42 %

PARKS & OPEN SPACES

23 m² / person

06 THREE-LEVEL SPATIAL SYSTEM FOR EVIDENCE-BASED DECISION-MAKING

A "perception - judgment - decision" system to improve governance efficiency.

B TRANSPORT LAYER

Sensing & Data Support

- Multi-source data collection
- Real-time monitoring
- Data fusion & cleaning
- Evidence generation

A AI LAYER

Analysis & Value Judgment

- Spatial analysis
- Scenario simulation
- Impact evaluation
- Optimization recommendations

O DECISION LAYER

Decision & Action

- Plan formulation
- Policy implementation
- Public participation
- Feedback & adjustment

TRANSPORT (B)

- Data sensing
- Evidence support

AI (A)

- Professional analysis
- Value judgment

DECISION (O)

- Decision execution
- Outcome evaluation

OPEN · INTEGRATED · ECOLOGICAL · SMART

OPEN · INTEGRATED · ECOLOGICAL · SMART

A02 LAND USE & RENEWAL

Reference for smart building and future scenarios

CONTINUOUS VERIFICATION LOOP
Iterative | Measurable | Actionable

01 Land functions, spatial carriers and industrial integration

03 Land use structure and development interface

05 Renewal project record

02 Renewal project timeline and policy tools

04 Planning effectiveness

06 Classification by approval & incentive triggers

A03 MOBILITY & MUNICIPAL

Building a connected, convenient, resilient and supportive system for slow traffic and municipal services

01 Slow traffic entrance positioning and service distance

Ensure entrance coverage and everyday usability

Slow traffic system strategy

02 Roads, rail, and slow traffic forming a hierarchical development intensity system

Build a multi-layered intensity structure

03 Six functional exits at transportation hubs, beyond mere points

Create a hub system

System support strategy

04 Municipal and public service facility checklist

Ensure service quality and coverage

Category	Facility	Current Status	Target Standard	Planning Strategy
Water Supply	Water plant, reservoirs, pumping stations	★★★★★	★★★★★	Optimize network, improve reliability
Drainage	Sewage system, pumping stations	★★★★★	★★★★★	Complete pipes, reduce flooding
Power	Substations, power distribution	★★★★★	★★★★★	Upgrade grid, improve reliability
Telecom	Communication rooms, communication nodes	★★★★★	★★★★★	Expand capacity, improve coverage
Gas	Gas stations, pipeline network	★★★★★	★★★★★	Upgrade network, improve safety
Heating	Heating plants, heat exchange stations	★★★★★	★★★★★	Optimize network, improve efficiency
Fire Protection	Fire stations, hydrants	★★★★★	★★★★★	Complete layout, improve response
Public Services	Schools, hospitals, cultural & sports	★★★★★	★★★★★	Balance distribution, improve quality
Sanitation	Waste transfer stations, public toilets	★★★★★	★★★★★	Enhance facilities, improve environment

Municipal and public service distribution map

05

GREEN SPACE AND BLUE-GREEN SPACE CONSTRUCTION AND MANAGEMENT

Construction sequence

STAGE 1 · NODE FIRST

• Prioritize key nodes: transit hubs, plazas, waterfronts

• Quick-win projects

• Activate community

• Build momentum

STAGE 2 · LINKAGES NEXT

• Connect corridors and waterfronts

• Ecological restoration

• Improve walkability

• Expand green network

STAGE 3 · NETWORK COMPLETE

• Build complete green-blue system

• Diverse activities

• Sustainable operations

• Long-term management

Goal: From "Disconnected" to "Connected", from "Pass-by" to "Stay", from "Transport Space" to "Public Living Room".

06

GREEN SPACE AND BLUE-GREEN SPACE CONSTRUCTION AND MANAGEMENT

Policy tools and implementation

Renewing heritage assets with service functions, driving green economy and inclusive public spaces.

SHARE · Shared Governance

Co-management of public space and community life

CREATE · Creative Activation

Activate heritage / Culture-led placemaking

CHILL · Climate-Resilient

Nature-based solutions / Heat mitigation

INVEST · Value Investment

Diversified funding / Long-term value creation

PROJECT LOCATION

A06 AI SCENARIOS & OPERATIONS

AI-POWERED URBAN OPERATIONS, INTELLIGENT FUTURE LIVING

Harnessing core AI technologies to build a citywide intelligent operations ecosystem, enabling data-driven governance, refined services, and sustainable growth for smarter, safer, and more livable cities.

01 AI SCENARIOS & OPERATIONS From spatial prototype to continuous validation

Smart Mobility

AI traffic prediction, real-time optimization, signal coordination

Smart Environment

Air quality monitoring, noise detection, flood early warning

Smart Public Services

AI-assisted services, intelligent dispatch, citizen convenience

Smart Communities

Access control, facility management, resident engagement

04 AI SCENARIOS & OPERATIONS

Scenarios and commitment

- Scenarios Driven**
Focused on real urban scenarios, addressing key challenges in mobility, environment, safety, and public services.
- AI Empowerment**
Leveraging AI to enhance decision-making, execution, and service efficiency across the city.
- Our Commitment**
Committed to responsible AI, data security, and sustainable development for a better urban future.

05 AI SCENARIOS & OPERATIONS From spatial prototype to continuous validation

06 AI SCENARIOS & OPERATIONS Safety, experience, cost dimensions

Safety Dimension
AI enhances urban safety through prediction, prevention, and rapid response.

Incidents Prevented	Response Time	Risk Detection Rate
3,820+	-35%	92%

Experience Dimension
AI improves citizen experience with smarter, more personalized services.

Citizen Satisfaction	Service Usage	Average Rating
92%	1.8M+	4.7/5

Cost Dimension
AI drives operational efficiency and reduces resource consumption.

Operating Cost Saved	Energy Saved	ROI
2.3B+ RMB	18.7%	256%

AI EMPOWERS CITIES • INTELLIGENT OPERATIONS • BETTER LIFE

A07 INDICATOR REVIEW & COMPLIANCE

BUILDING A SCIENTIFIC PLANNING INSPECTION SYSTEM TO ENSURE COMPLIANCE AND ENHANCE AUTHORITATIVENESS

Scientific · Rigorous · Data-driven · Traceable · Auditable

01 Indicator review and compliance checked

Display the planning indicator review system

Total planning area
43.6 km²

Urban built-up area
≈11.4 km²

Constructible land area
368.4 ha

Review within data boundaries · No cross-boundary calculations

02 Three-layer scope must fall on real urban base

Define review scope based on actual urban spatial base

Administrative scope alignment
Administrative boundary vector data is strictly aligned with the latest officially released boundaries to ensure accurate scope.

Urban base verification
Scope falls on the real urban base (land cover, building footprints, roads, etc.) to eliminate “blank areas” and mismatches.

Hierarchical scope control
City–District–Subdistrict three-tier scope cascade management, ensuring hierarchical consistency and precise aggregation.

03 Three scales with descriptions

Multi-scale planning indicators for full-depth review

Compliance basis

- ✓ Urban and Rural Planning Law of the People's Republic of China
- ✓ Regulations on Urban and Rural Planning Implementation
- ✓ National Standard for Urban Land Use Planning (GB50137-2011)
- ✓ Standard for Detailed Planning of Urban Residential Areas (GB50180-2018)
- ✓ Code for Urban Engineering Planning (GB/T 50353-2013)
- ✓ Other relevant laws, regulations and technical standards

04 Current status

Display current data validation and evidence workflow

Planning Basis

- Latest planning documents
- Control indicators and drawings

Review & Verification

- Indicator system verification
- Data cross-check and consistency

Professional Evidence

- Professional analysis reports
- Evidence traceable and auditable

Data Time
2024.05

Data Accuracy
98.7%

Boundary Match
100%

05 Data cards

Key indicator summary cards

Urban built-up area
≈11.41 km²
Calculated from the real urban base

Constructible land area
3
Pieces of land

Built-up area ratio
12.3423%
Built-up area / total planning area

Constructible land ratio
7.3281%
Constructible land / total planning area

06 Methodological supplement

Explain method and scope to support rigorous review

Data sources
Based on official authoritative data, including land use, building footprints, roads, DEM, and administrative boundaries, etc.

Calculation method
Overlay analysis and spatial statistics are performed within the administrative boundary. No cross-boundary data is included.

Indicator definition
Indicators are defined in accordance with national standards and planning requirements to ensure scientific and comparable results.

Scope control
Three-layer scope verification ensures all data falls on the real urban base, avoiding “blank areas” and boundary mismatches.

Review assurance
Multi-level review and professional validation ensure the accuracy, reliability, and traceability of results.
