

CENTENNIAL JINGZHANG AI INNOVATION BELT

JINGZHANG RETURN LINE

Spatial strategy: Open Rail

From railway ingenuity to an accessible, co-created, testable and reversible AI civic innovation commons.

Concept proposal | non-official spatial inference | official polygons / CAD / GIS pending

Reading Guide and Deliverable Structure

SPATIAL EVIDENCE

AMap, GeoJSON and source records control location, range, routes and scale.

DESIGN INFERENCE

Inferred envelopes, nodes and phases remain explicit pending official data.

GENERATED SCENES

Lovart communicates experience, material and atmosphere—never map facts.

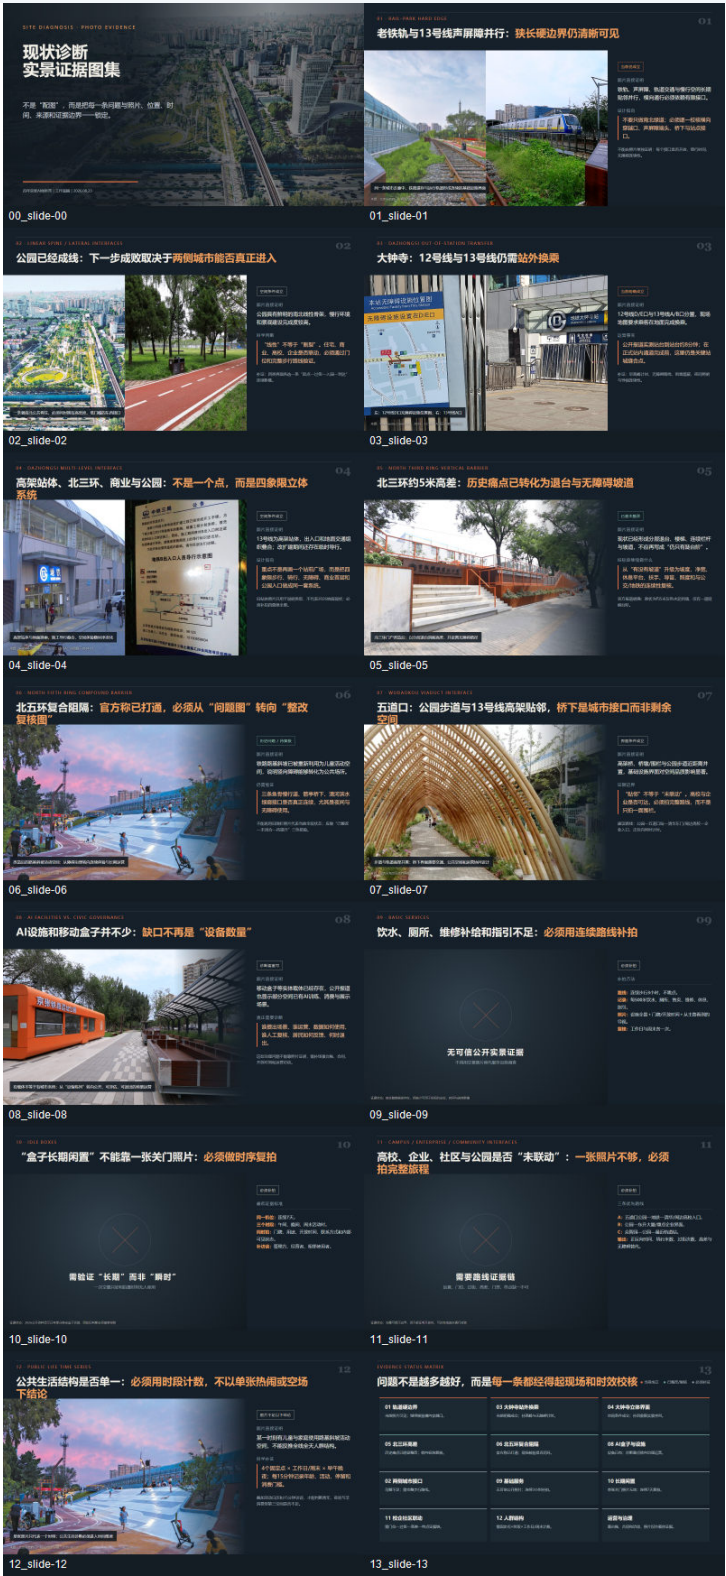

- A3: 15-page design narrative

- Six AMap-constrained generated scenes

- A0: seven review boards

- Nine GeoJSON layers + metrics + matrices + self-check

Existing Conditions | Strong resources, weak continuity as a public system

- Discontinuous rail-park interfaces
- Weak east-west stitching
- Scarce non-commercial youth space
- Station access and universal design gaps
- Innovation resources detached from daily life

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

CENTENNIAL JINGZHANG AI INNOVATION BELT

Overall Structure and Three-Level Scope

Jingzhang Railway Heritage Park is the civic-life spine linking industry, campuses, communities and rail nodes from the North Fifth Ring to the North Second Ring. AMap and local GeoJSON control location.

Jingzhang Return Line • Open Rail

Concept proposal • Provisional geometry • Professional follow-up required

Verified position-control map
A0 Origin building, 51 Wudaokou and two park polygons; 40/40 AMap files passed

The belt is not an abstract green line
The concept model was realigned 0.012° west. The rejected Origin rectangle is deleted; its area-equivalent envelope is hidden.

3 positions • 5 functions • 3 areas + 2 wings

Culture / life experience AI convergence innovation

Stack • ecosystem • scenarios Active city • governance

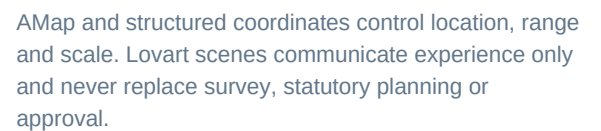

Layers and status

- North Fifth Ring-North Second Ring scope approx. 11.4 km²
- Jingzhang Railway Heritage Park civic-life spine
- Zhongzhiyuan AI Innovation Accelerator
- Dazhongsi AI Industry Cluster

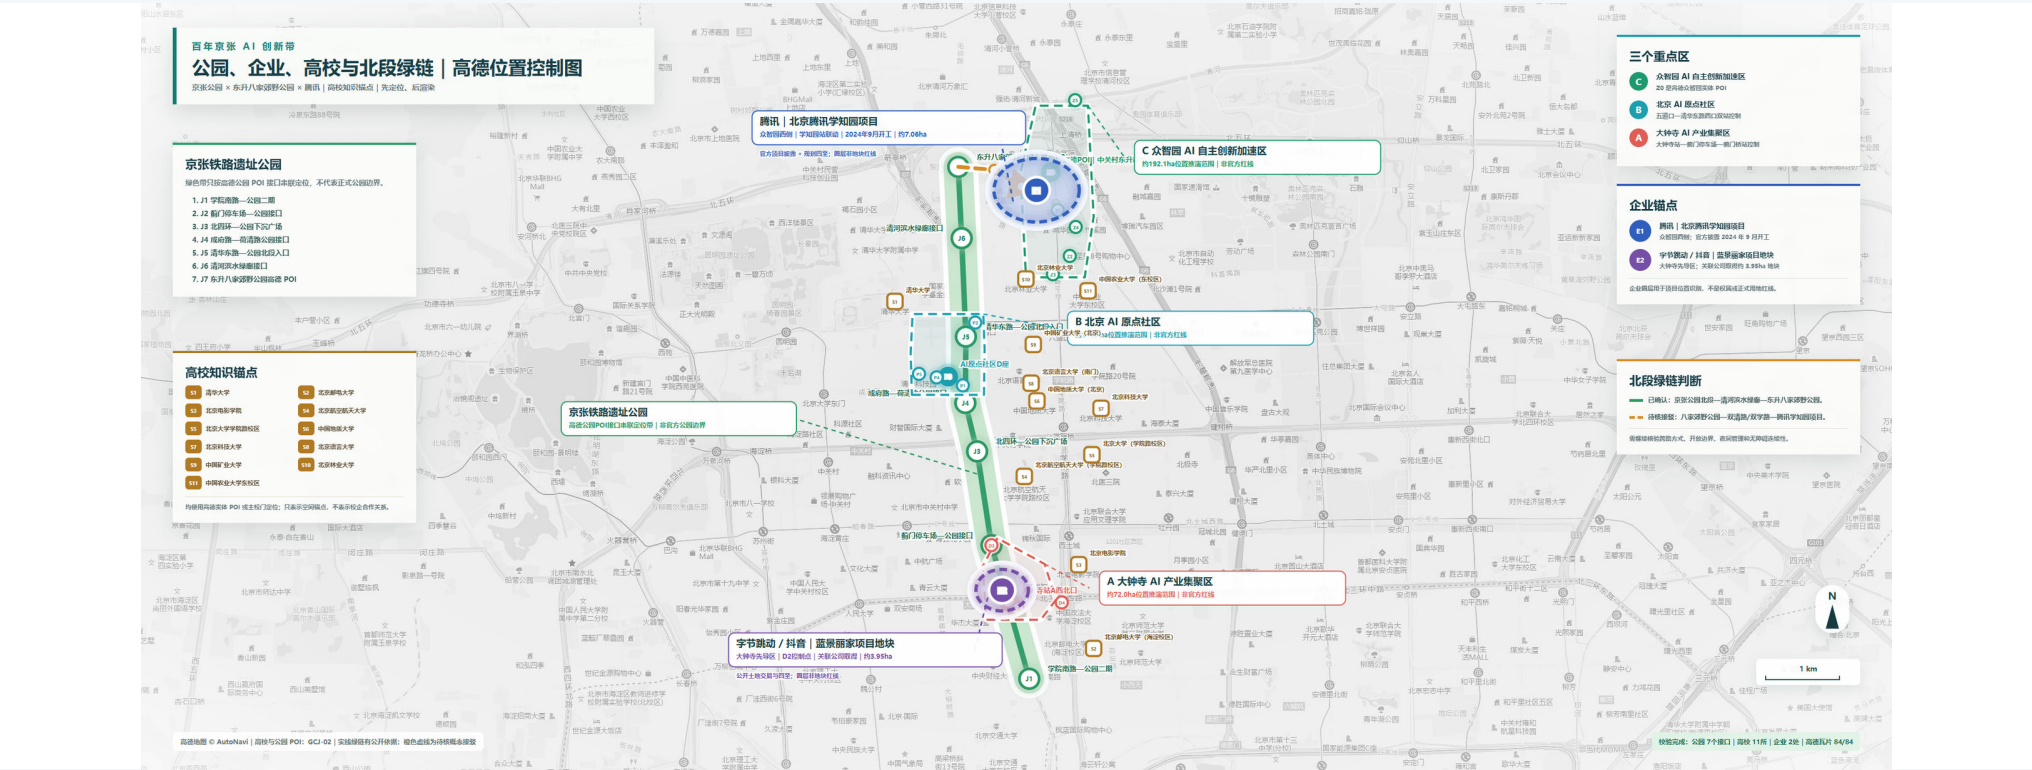

V10 AMap.audit • ALIGN-V12 GeoJSON • Lantour studies rejected as geography

Data: local submission GeoJSON / metrics.json | All extents are provisional constraints; not official redlines or approvals.

The park becomes a continuous spatial body

Northern Green Link | A continuous university-enterprise-park interface

V4: J6 northern green-link interface

Active mobility and knowledge exchange

Candidate cross-link remains subject to field verification

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Beijing AI Origin Community | An accessible civic innovation living room

V1: P3 AI Origin Community D

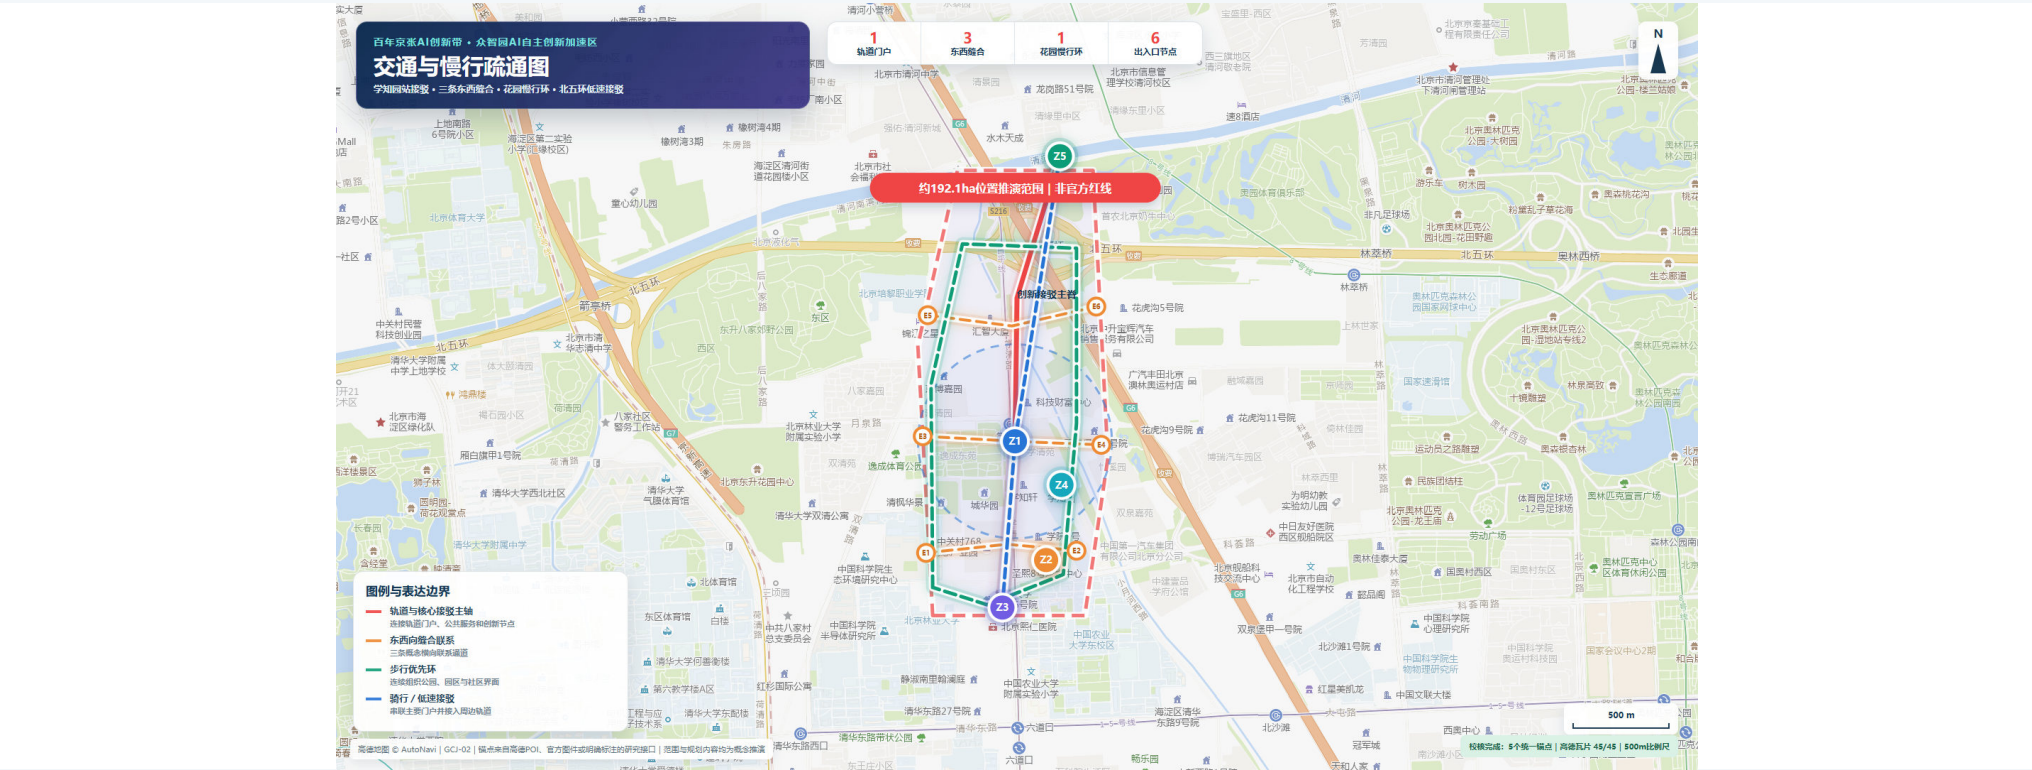

Dual-station access, youth learning and public AI service

Human service and non-digital alternatives remain

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Zhongzhiyuan | Reversible and supervised Physical AI test street

V2: Z1 Xuezhiyuan Station

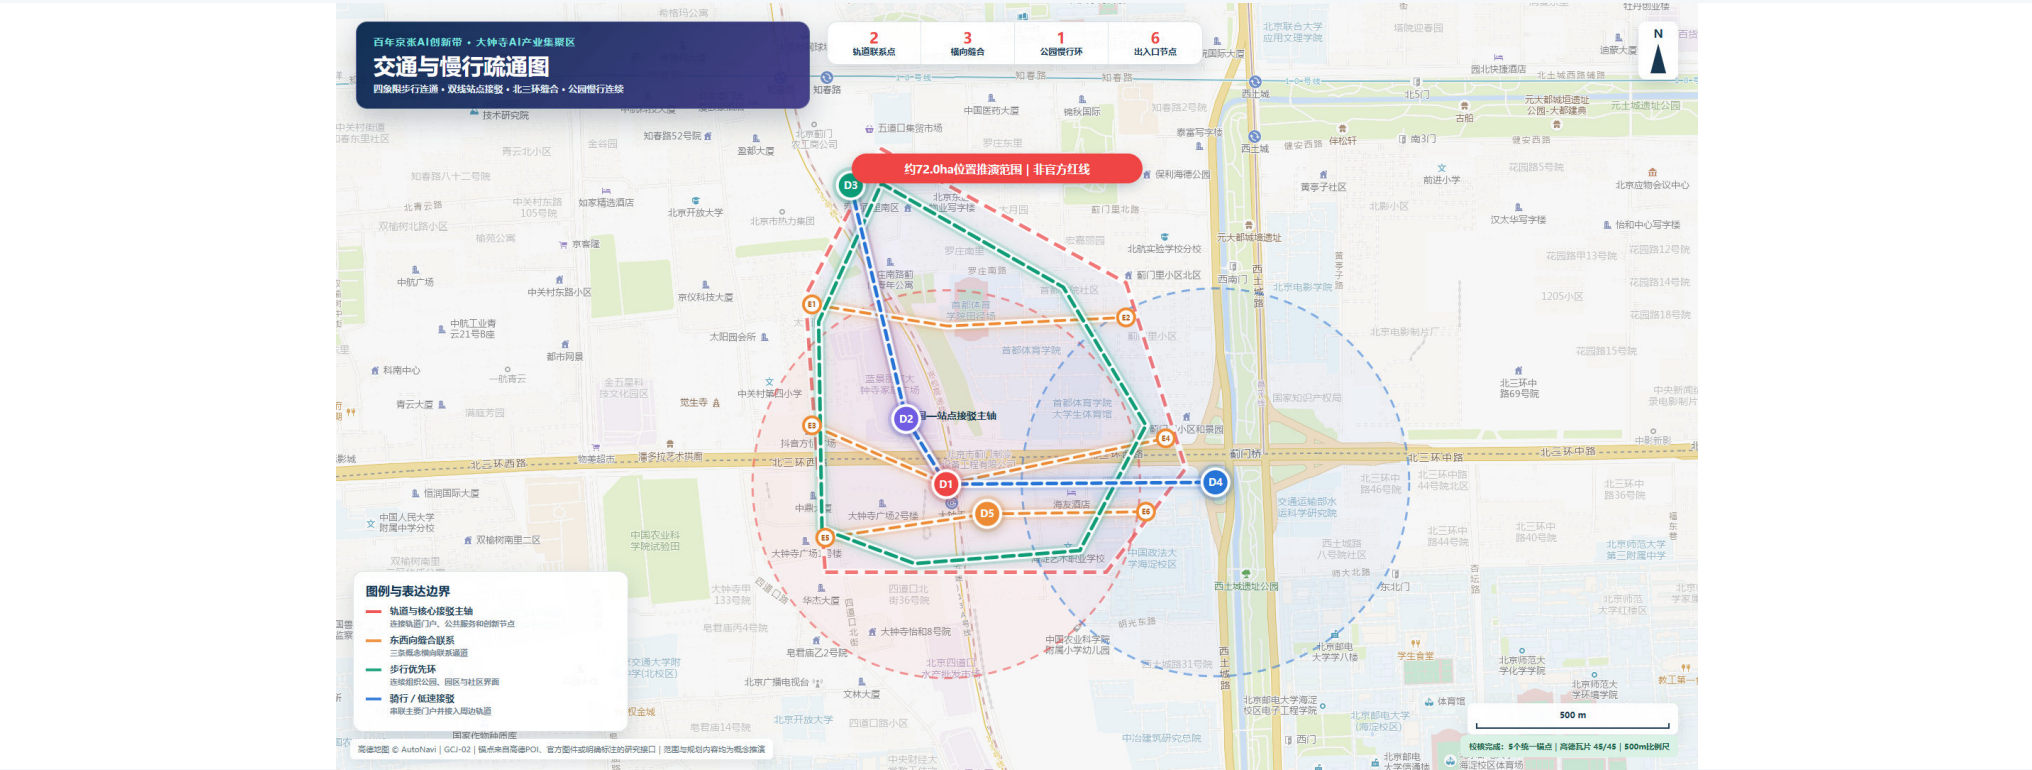

Low-speed testing and open validation

Explicit safety, accountability and exit conditions

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Dazhongsi | Rail gateway, heritage memory and innovation service

V3: D1 Dazhongsi Station

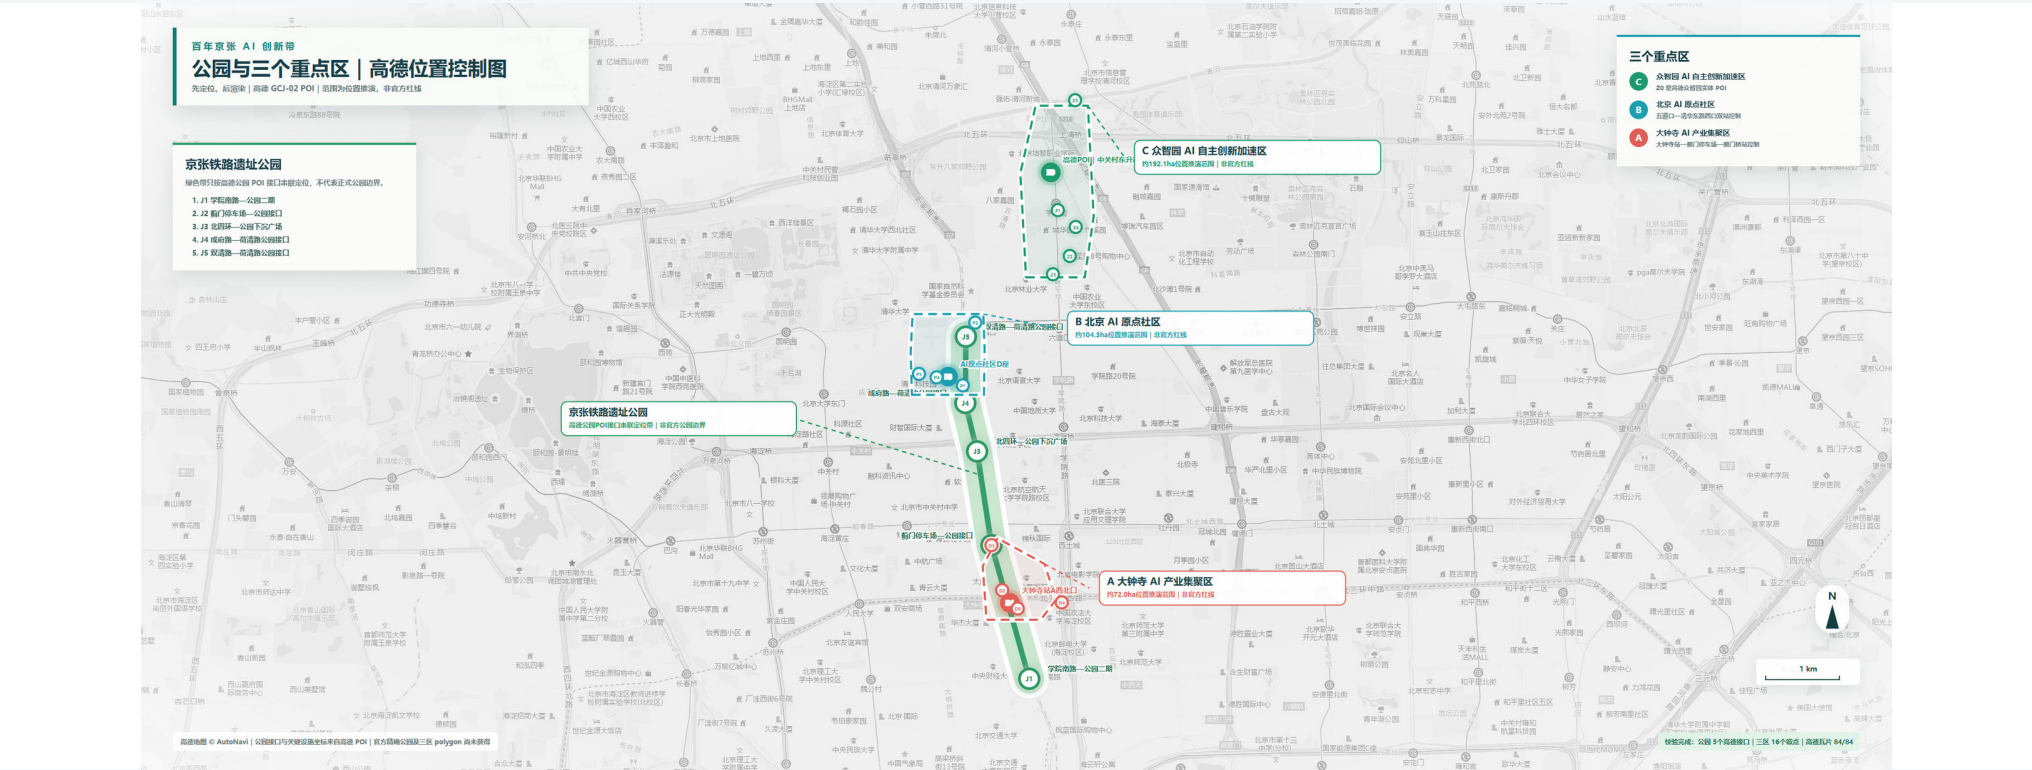

Market renewal and heritage-park interface

A civic living room links rail and industry services

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Wudaokou Youth Street | Non-commercial, co-created and shared day-night

V5: J4 Chengfu Rd–Heqing Rd park interface

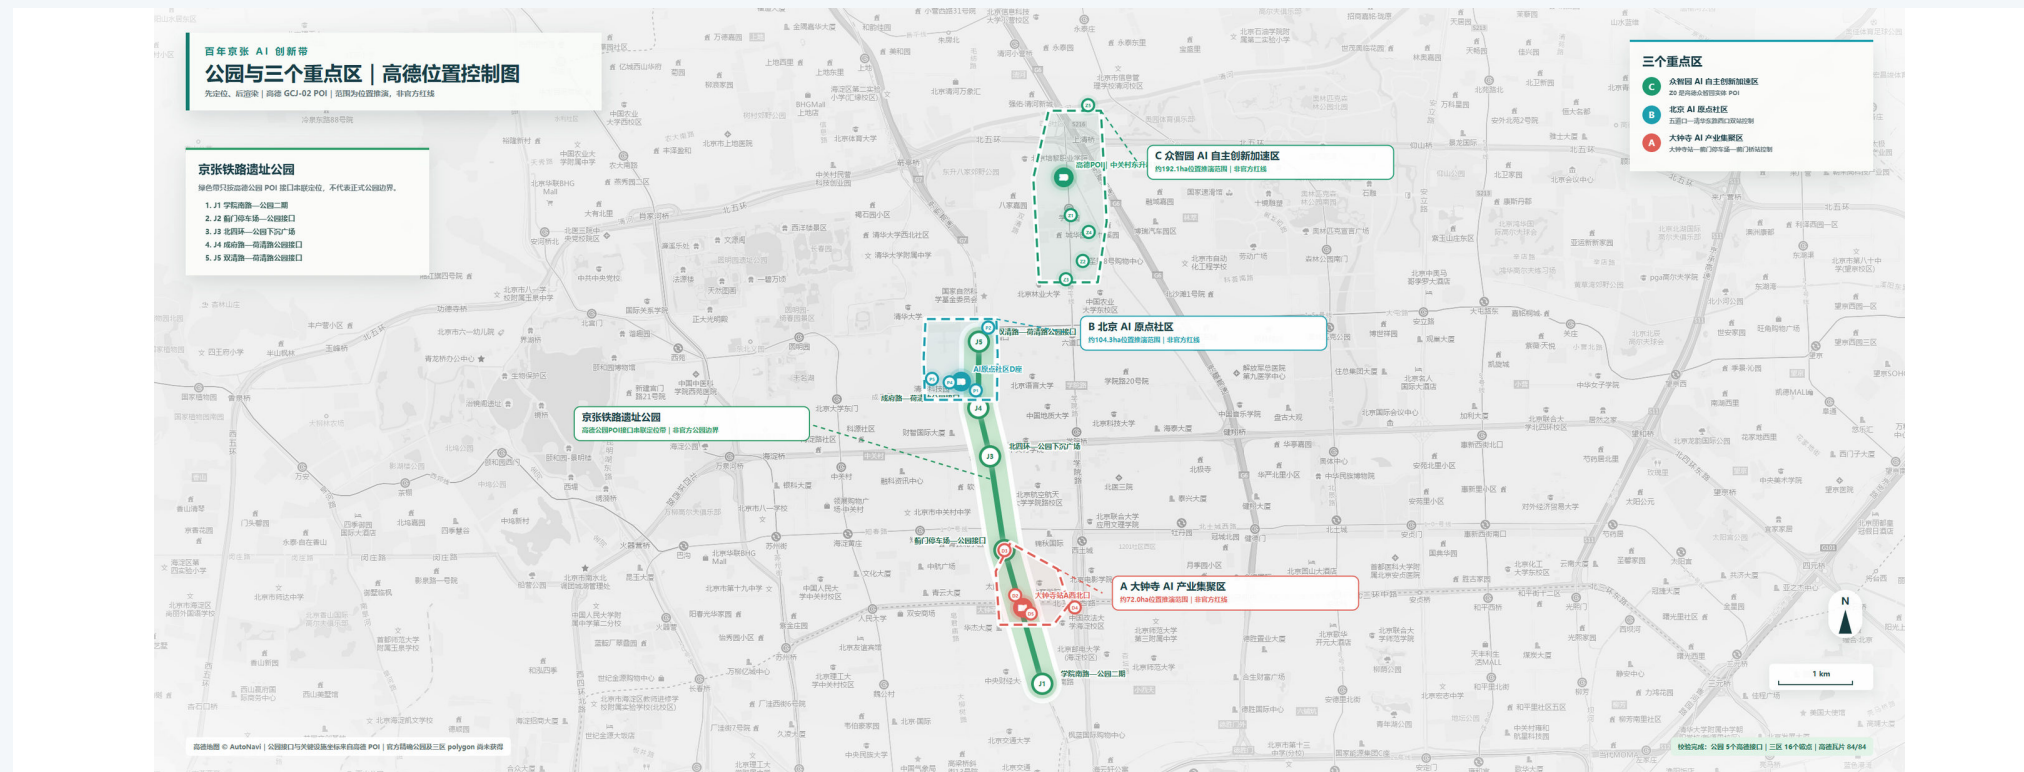

Study, work, sport and social life

Youth can propose, apply, curate and review

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

North Fourth Ring–Park Sunken Plaza | Under-bridge retrofit

- V6: J3 North Fourth Ring park interface

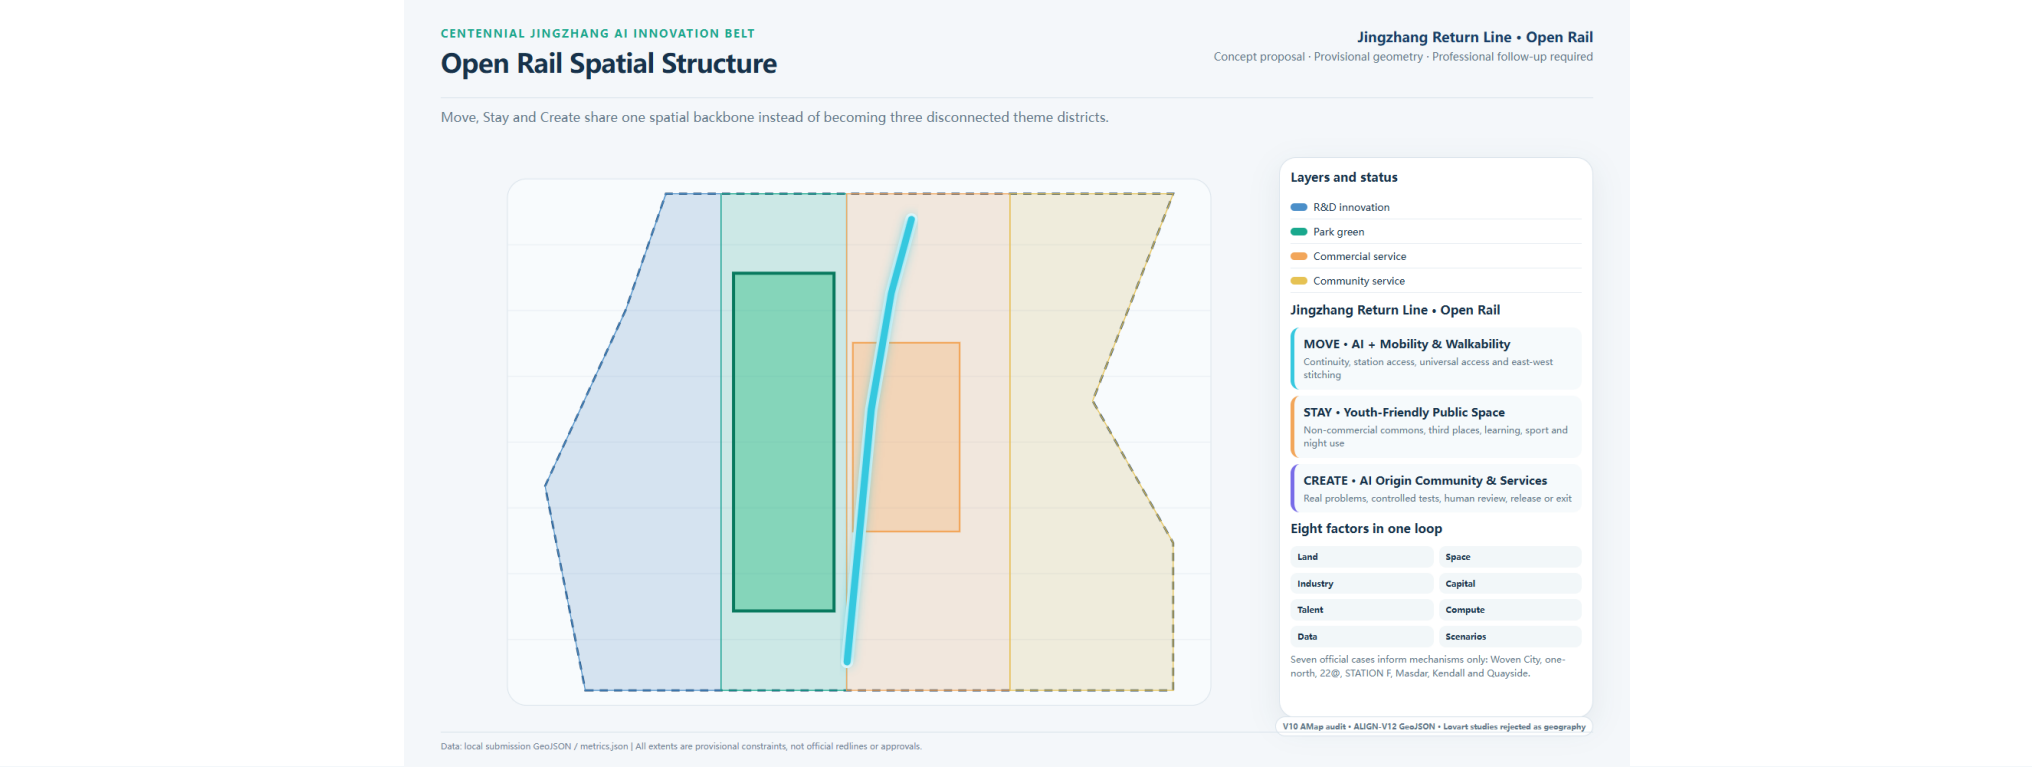

- Zhichun understory work garden is a design-scene name

- Small-scale stitching instead of wholesale clearance

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Land Use and Renewal | Retain—stitch—activate

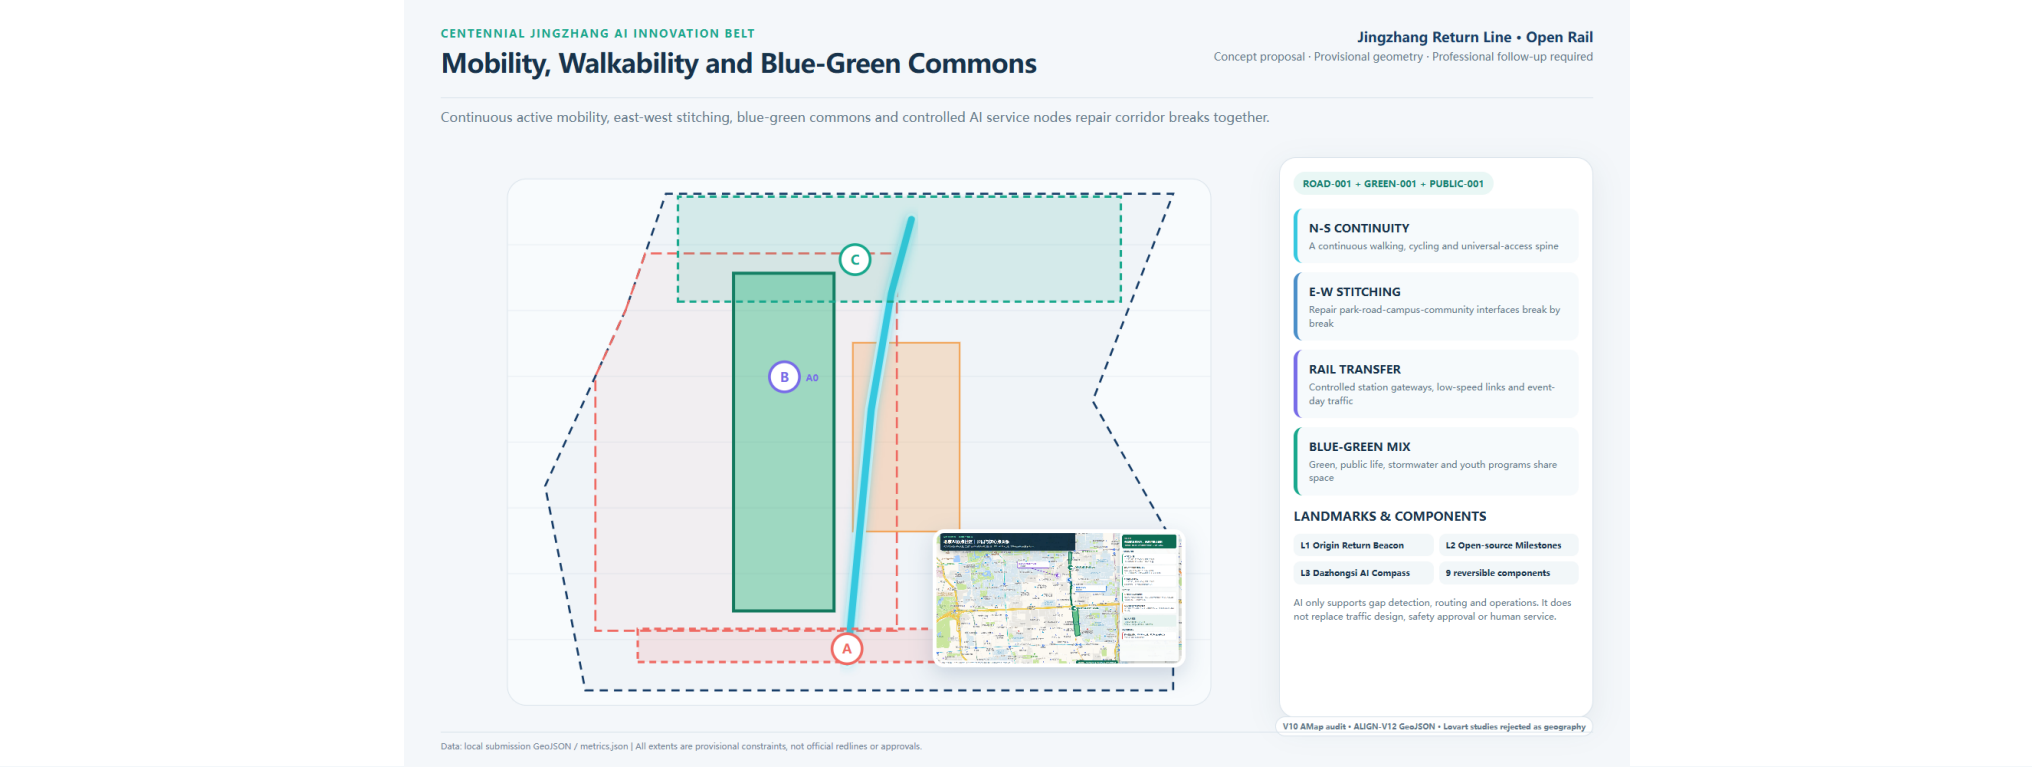

- Retain heritage direction, mature trees and viable buildings
- Stitch with active ground floors, courts and under-bridge space
- Intensity, ownership and retain-renovate-demolish remain pending

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Mobility and Blue-Green Systems | Continuity, stitching and interchange

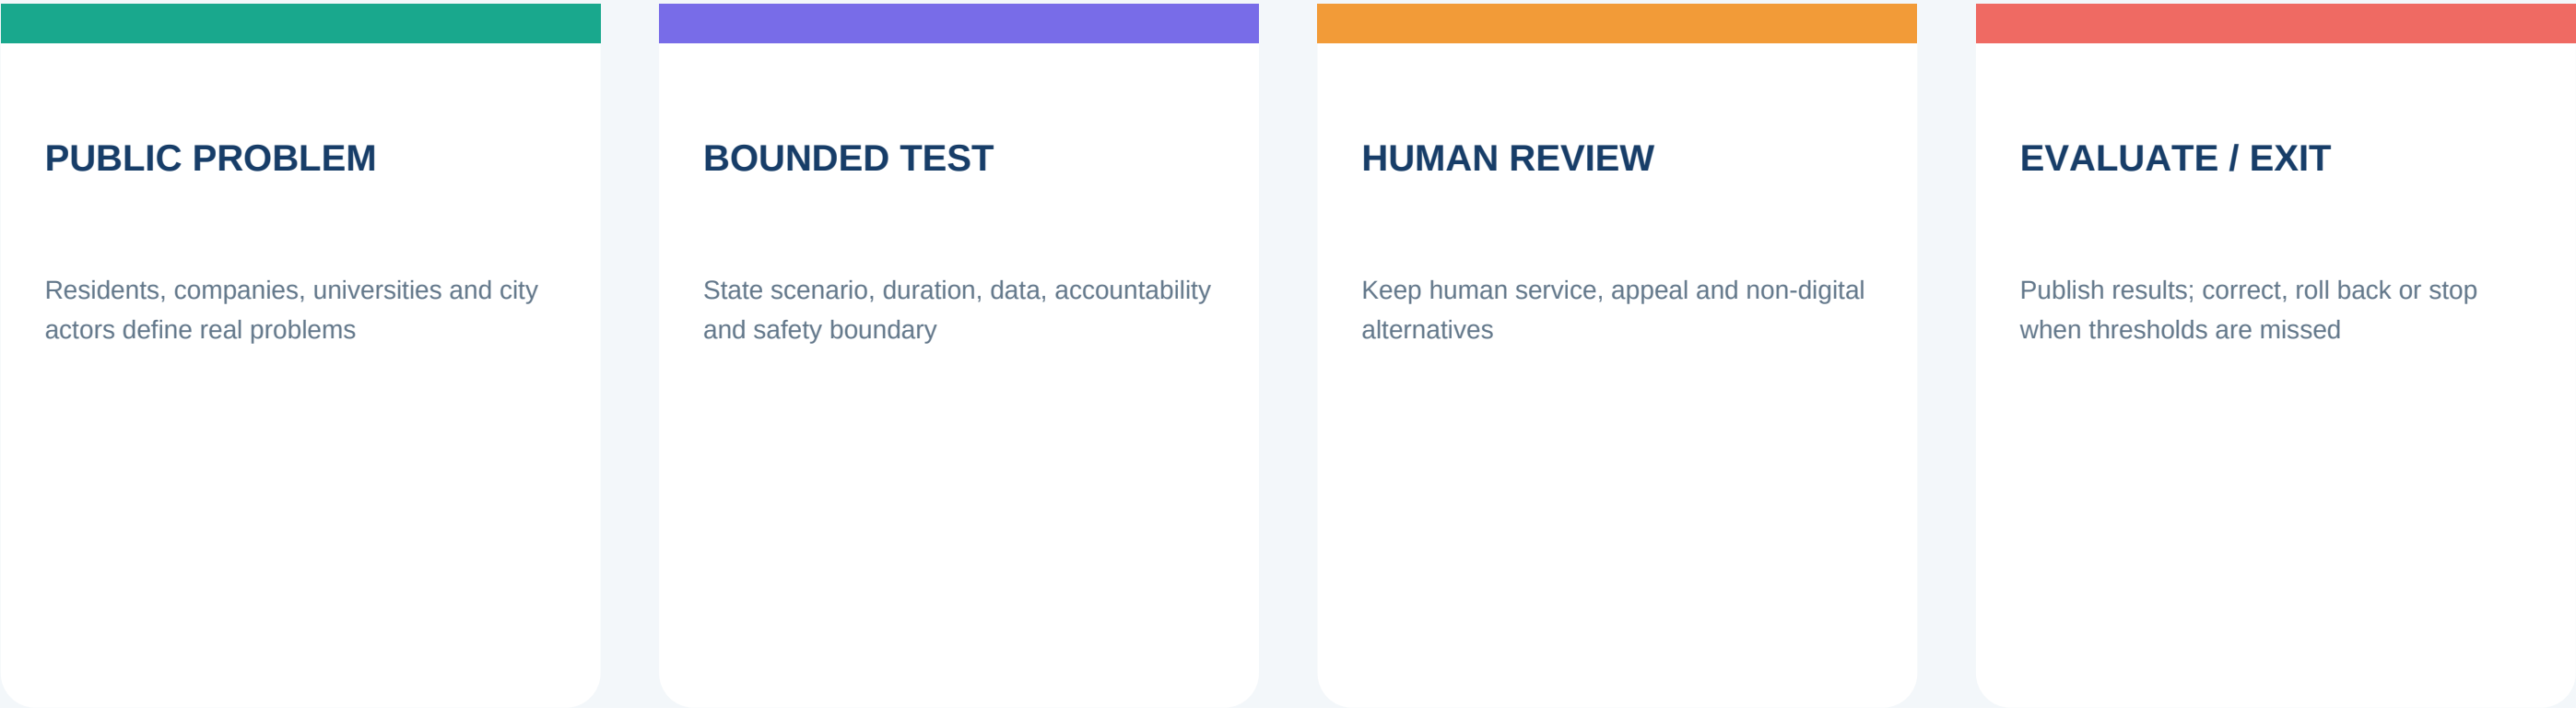

- Continuous station-park-community-campus access
- Sixteen interfaces require field and accessibility review
- Stormwater, shade, walking and cycling work as one infrastructure

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

AI Scenarios and Operations | Public Problem—Bounded Test—Human Review—Exit

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Delivery | 100-day Pilots—Key-area Interfaces—Civic Innovation Commons

NOW | 100 days

Mobility gaps, civic living room, youth co-creation rights and public AI register

MID | key-area interfaces

Validation terminal, Origin services, Dazhongsi gateway and northern green link

LONG | civic commons

Member alliance, neutral operator, annual program, public evaluation and exit

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.

Metrics, Evidence and Risk | Recomputable claims and visible gaps

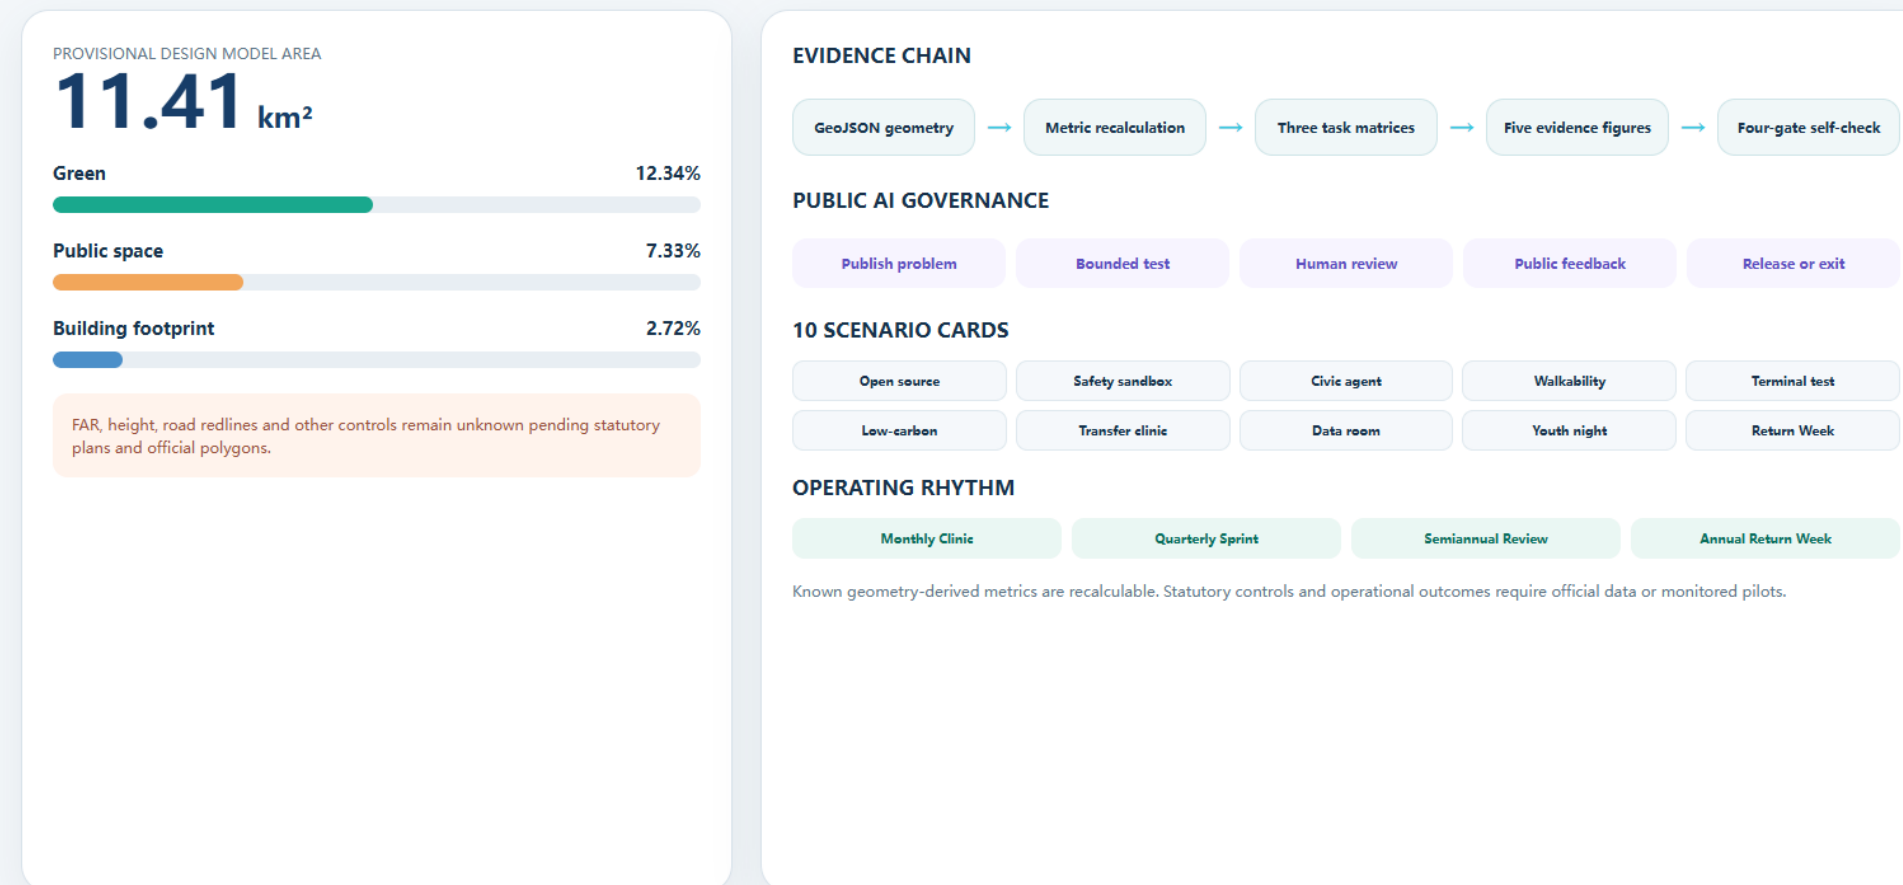

CENTENNIAL JINGZHANG AI INNOVATION BELT

Metrics, Evidence and Governance Loop

Jingzhang Return Line • Open Rail

Concept proposal · Provisional geometry · Professional follow-up required

Every value returns to GeoJSON and a formula. Metrics based on provisional geometry are low-confidence design quantities, not statutory controls.

Data: local submission GeoJSON / metrics.json | All extents are provisional constraints, not official redlines or approvals.

V10 AMap audit • ALIGN-V12 GeoJSON • Lovart studies rejected as geography

- Nine GeoJSON layers support area and ratio recomputation

- Sources, assumptions, metrics and matrices cross-reference

- Formal boundaries, controls, ownership, utilities and heritage remain pending

AMap and structured coordinates control location, range and scale. Lovart scenes communicate experience only and never replace survey, statutory planning or approval.
